# SECTION 8 : EXPOSURE CONTROLS/PERSONAL PROTECTION

MTN LIQUID COPPER

Code: EXG0120193

# 8.1 CONTROL PARAMETERS

If a product contains ingredients with exposure limits, may be necessary a personnel monitoring, work place or biological, to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment. Reference should be made to EN689, EN14042 and EN482 standard concerning methods for assesing the exposure by inhalation to chemical agents, and exposure to chemical and biological agents. Reference should be also made to national guidance documents for methods for the determination of dangerous substances.

## OCCUPATIONAL EXPOSURE LIMIT VALUES (TLV)

AGCIH 2017	Year	TLV-TWA		TLV-STEL		Remarks
		ppm	mg/m3	ppm	mg/m3	
Xylene (mixture of isomers)	1996	100.	434.	150.	651.	A4 , BEI
Copper powder (fine) > 9.1 mm2/mg	1990	-	1.0	-	-	Powder and mist
Acetone	2014	250.	594.	500.	1188.	A4 ,BEI

TLV - Threshold Limit Value, TWA - Time Weighted Average, STEL - Short Term Exposure Limit.

A4 - Non classified as carcinogenic in humans.

BEI - Biological exposure index (biological monitoring).

## **BIOLOGICAL LIMIT VALUES:**

This preparation contains the following substances that have established a biological limit value:

- Xylenes (technical or commercial grade) (2011): Biological determinant: methylhippuric acids in urine, BEI: 1.5 g/g creatinine, Sampling time: end of shift (2).

Acetone (2014): Biological determinant: acetone in urine, BEI: 25 mg/l, Sampling time: end of shift (2), Notation: (Ns).
 (2) When the end of the exposition not coincide with the end of the working day, the sample will be taken as soon as possible after the real exposition

ceases.

(Ns) Non-specific. The determinant is non-specific, since it is also observed after exposure to other chemicals.

## DERIVED NO-EFFECT LEVEL (DNEL):

Derived no-effect level (DNEL) is a level of exposure that is considered safe, derived from toxicity data according to specific guidances included in REACH. DNEL values may differ from a occupational exposure limit (OEL) for the same chemical. OEL values may come recommended by a particular company, a government regulatory agency or an organization of experts. Although considered protective of health, the OEL values are derived by a process different of REACH.

Derived no-effect level, workers: - Systemic effects, acute and chronic: Xylene (mixture of isomers) Copper powder (fine) > 9.1 mm2/mg Acetone	DNEL Inhalation           mg/m3           289. No exp the con	CMR EFFECTS:         Carcinogenic effects:       It is not considered as a carcinogenic product.         Contoxicity:       Toxicity for reproduction:       Does not harm fertility. Does not harm fertility. Does not harm the unborn child.         Effects via lactation:       Not classified as a hazardous product for children breast-fed.         DELAYED DAND IMMEDIATE EFFECTS AS WELLAS CHEMONIC EFFECTS FROM SHORT ANDLONG-TE RM E XPOSURE:         Routes of exposure:       May be absorbed by inhalation of vapour, through the skin and by ingestion.         Short-term exposure:       Harmful by inhalation. Harmful in contact with skin. Exposure to solvent vapour concentrations in excess of the stated occupational exposure limit, may result in adverse health effects, such as mucous membrane and respiratory system irritation and adverse effects on kidneys, liver and central nervous system. Liquid splashes in the eyes may cause irritation and reversible damage. Irritating to skin. Very small amounts aspirated by the lungs may cause severe pulmonary damage, including death. If swallowed, may cause irritation of the throat, other effects may be the same as described in the exposure. Repeated or prolonged contact may cause removal of natural fat from the skin, resulting in non-allergic contact dermatitis and absorption: Not available. ECTI	ON 13 : DISPOSAL CONSIDERATION	3			
13.1	WASTE TREATMENT METHODS: Directive 2008/98/EC~Regulation (EU) no. 1357/2014: Take all necessary measures to prevent the production of waste whenever possible. Analyse possible methods for revaluation or recycling. Dispose this material and its container to hazardous or special waste collection point. Do not discharge into drains or the environment, dispose at an authorised waste collection point. Waste should be handled and disposed in accordance with current local and national regulations. For exposure controls and personal protection measures, see section 8. Disposal of empty containers: Directive 94/62/EC~2005/20/EC, Decision 2000/532/EC~2014/955/EU:				
	Emptied containers and packaging should be disposed in accordance with currently local and national regulations. The classification of packaging as hazardous waste will depend on the degree of empting of the same, being the holder of the residue responsible for their classification, in accordance with Chapter 15 01 of Decision 2000/532/EC, and forwarding to the appropriate final destination. With contaminated containers and packaging, adopt the same measures as for the product in itself.  Procedures for neutralising or destroying the product:				
	Controlled incineration in special facilities for chemical waste, in accordance with local regulations.
